DETAILED ACTION

Allowable Subject Matter

1. Claims 3-14 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-2 and 15-17 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ueha Hashimoto (Ultrasonic Symposium 10/1998. Proceedings.pp.661-666 vol1) in view of APA

Hashimoto discloses in fig.2 an acoustic actuator comprising: an acoustic wave generator (1), and a movable element having a planar surface (3) operatively connected to the acoustic generator for the purpose of receiving and deflecting acoustic waves. Hashimoto does not disclose a substrate.

APA discloses in fig.7 an ultrasonic transducer comprising: a MEM (750) position on a substrate (710) for the purpose of supporting the MEM device. The method of actuating the device is inherent base on the structural limitation.

Art Unit: 2834

Therefore, it would have been obvious to one having ordinary skill in the arts at the time the invention was made to modify the actuator of Hashimoto with the substrate of APA for the purpose of supporting the MEM device.

It also would have been obvious to one having ordinary skill in the art at the time the invention was made to have the radiation pressure between 100 to 1000pa and the sound frequency at approximately 5 MHZ, since it has been held that were the general condition of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. In re Aller, 105 USPQ 233.

In reference to claim 1, it has been held that recitation that an element is "capable of " performing a function is not a positive limitation but only required the ability to so perform. It does not constitute a limitation in any patentable sense. In re Hutchison, 69 USPQ 138.
